Any Broadband or TV deal, done.

Customers want to buy where they discover – right in your app.

The Automation Cloud can perform any transaction humans can do online. Train it to purchase any broadband package or TV deal.

You get consistent APIs for broadband. Suppliers don't need to integrate, it's compliant and secure. All we need is a website.

UBIO Automation Cloud

The Automation Cloud provides interactive, transactional APIs to buy online. We provision a pool of Robots which execute transactions at your customers' command.

Your users discover, UBIO transacts.

- Integrate our API or use our SDK
- One integration, infinite suppliers
- Fully secure and Level 1 PCI compliant

Engaged customers

- No need to leave your app
- End to end insights & data
- Way better conversion

Your customers prefer to buy where they discover. With you.

You bring the full transactional experience into your app so customers stay and purchase.

User profiles? Better still. Buyers can purchase in a tap or two.

Broadband and TV with the Automation Cloud

Automation Cloud

How does the Automation Cloud work?

1. Buyers discover the way they do now

2. When they're ready to purchase they use your UX funnel

3. Our robots book with the supplier in the Automation Cloud

4. Payments are fully PCI compliant

5. The customer experience is yours, end-to-end

The buying relationship remains with the supplier. They send the booking confirmation and remain merchant of record.

What can I expect to achieve?

Containing the experience in your app means better conversion and more effective customer acquisition spend. We currently see conversion uplifts upwards of 25%.

How do I integrate?

Use our Javascript SDK or directly call our API. We have guided documentation to get you on-board quickly.

Can I get data?

Yes. You get access to our Dashboard so you can monitor your automations.

Do you just automate broadband?

No, we automate anything including other comparison products and work in travel and finance. You can automate yourself or task our Automation Team to manage it all.

Is the process secure?

Everything is encrypted, PII is not retained and payments are PCI-DSS Level 1 compliant.

What about compliance?

We can return pricing, opt-ins and any other information so your journey is as compliant as it is on the supplier.

What if the supplier changes its website?

Service continuity is designed-in. We monitor 24/7 and re-train our robots. Generally we can cope with minor changes with no need to intervene.

What will it cost?

We fit in with your current model and usually take a small % for each transaction.
